Tan Phu District, Ho Chi Minh City

21/08/2005

EDUCATION

Ho Chi Minh City University of Transport (UTH)

2023 - Present

Major: Software Engineering

GPA: 3.18/4.0

TECHNICAL SKILLS

Technical Skills

- Frontend Web Development (HTML, CSS, JavaScript)
- RESTful API Integration
- Version Control: Git, GitHub
- Task Management: Jira
- Basic understanding of Software Development Lifecycle (SDLC)
- Debugging and web application testing
- proficient in office tools

Soft Skills

- Teamwork and collaboration
- Effective communication
- Self-learning and research ability
- Time management and meeting deadlines
- Reading technical documentation in English

Công Nghệ Sử Dụng

HTML, CSS, JavaScript
RESTful API
Git, GitHub
Jira
Python

Sở thích

- Reading
- Watching movies
- Sports

LAM THUY NGOC

SOFTWARE DEVELOPER INTERN

Software Engineering student with a strong interest in frontend development and building user-friendly web applications. Experienced in developing academic projects with API integration and teamwork using Git. Seeking an internship to further develop practical skills in a real-world environment.

WORK EXPERIENCE

Academic Projects & Practical Training

2023 - Present

Participate in group software development projects during your studies.

- Participate in group software project development during your studies.
- Build web interfaces, develop functionality, and integrate APIs for the system.
- Use GitHub to manage source code and Jira to track project progress.
- Collaborate in teamwork and participate in testing and improving application quality.

PROJECTS

Smart Traffic Management System

1-2025 - 3-2025

Frontend Developer / Software Developer

- Developed frontend UI using HTML, CSS, JavaScript for a traffic management system
- Design and build a web interface that displays traffic information clearly and easily.
- Implement API integration to connect the frontend with the backend system and display real-time traffic data.
- Support testing and interface improvement to enhance user experience.
- Manage source code and collaborate with the team via GitHub.

SaaS Smart Restaurant Management Platform with QR Code Ordering

10-2025 - 12-2025

Frontend Developer

- Participate in developing a web interface for a restaurant management system that allows customers to order food via QR code.
- Build a user-friendly menu view, menu settings, and order status tracking.
- Implement an integration API to connect the web interface with the system's backend and display menu data, orders, and restaurant information.
- Support optimization to enhance user experience across multiple devices.
- Consolidate the team and manage the source code project on GitHub.
